The Water Intelligence  
System from Hach

# Onsite Evaluation Guide

*Be Right™*

# Claros Onsite Evaluation Guide

---

## Evaluation objectives

A Hach® team will conduct an extensive and in-depth review of the site, influent to effluent, and make recommendations for improving process control, cost savings, and meeting regulatory compliance norms.

### Maximise Uptime

We strive to help you identify and implement robust, accurate analytics solutions to better manage and optimise processes and improve efficiency.

---

### Maintain Quality

Specially designed analytical solutions can ensure high quality standards of your plants operations are continually met.

---

### Protect Your Investment

The right analytics is the key to long plant life, optimum cost savings and a strong compliance profile.

---

### Benefit from Partnering

Local technical and service support provides assistance when required.

---

## Evaluation process

The onsite evaluation has three main phases, during which your specific needs will be considered relative to Hach solutions. The process is collaborative and will address your unique needs and goals.

### Phase 1: Site Selection & Setup

- Sites identified by location or corporate request
- Data query to establish problem areas, potential needs and identify required personnel
- Schedule visit and pre-call to align expectations

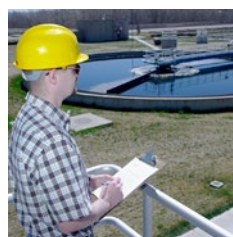

*Evaluations at one or more sites can potentially lead to changes in overall plan for testing, instrumentation, data handling and service*

---

### Phase 2: Onsite Compliance & Optimisation Review

- Plant walk-through from influent to effluent water
- Multiple teams may cover assigned areas (lab, process, software)
- Onsite debrief to discuss preliminary findings

### Phase 3: Final Report & Recommendations

- Present report and findings, onsite or remotely
- Collaborate in qualifying and prioritising opportunities for improvement
- Sign off on implementation plan and project costs

## About Hach

Since being founded, Hach has led the industry in developing innovative laboratory and process solutions to help our customers analyse their water more efficiently and more effectively. In recent years, Hach has been an innovator in software solutions, with offerings such as Claros the Water Intelligence System, to optimise Instrument, Data, and Process management, with compatible systems such as RTC (Real Time Control), MSM (Mobile Sensor Management) and Prognosys (for proactive instrument maintenance).

Today, Hach products can be found around the globe in a wide range of lab, field, and in-process uses in municipal and industrial facilities, giving operators and managers confidence in the many decisions they make to ensure compliance, improve energy efficiency, and reduce waste. We provide the best-in-class products, industry leading experts, and local support, to help our customers manage their water.
